

1. Reflect $\triangle ABC$ across the x-axis.

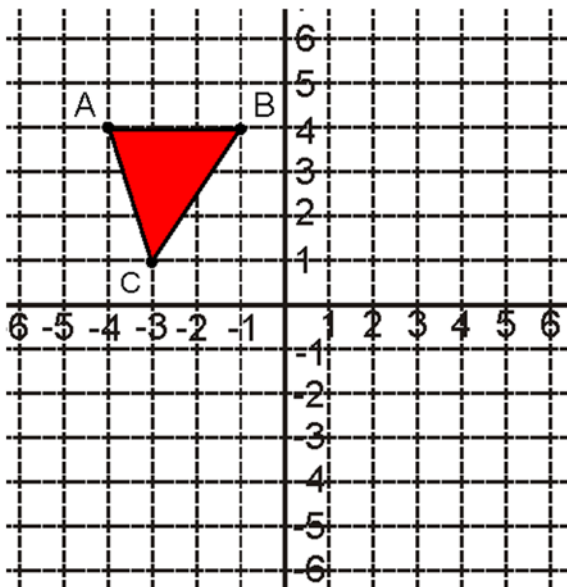

2. Of the two figures in the graph to the left; the original and the reflection, which shape is the image and which is the pre-image?

Image is:

Pre-image is:

3. Translate the triangle right 6 units.

4. Rotate the figure 90° clockwise about the origin.

5. What are two other names for rigid transformations?

6. Use the reflection of a point across a line to locate point **H**, the best place to connect **F** and **G** so that the distance **FG + GH** is minimized.

7. Since **H** minimizes the distance from **F** to **G'**, it also minimizes the distance from **F** to **G**. Why is this true?
